
Inputs distributed AI-derived product ▪ producer documentation ▪ administrative and auxiliary context
Stage 0. Intended-use and risk gate
Decision brief covering task, affected population, extent, consequence of error, required accuracy, completeness, currency, reproducibility and the applicability of each stage
tests against the stage-0 requirements
1 Discovery, ontology and provenance
2 Schema, scope and geometry integrity
3 Metric semantics and verification
4 Population, thresholds and topology
5 Aggregation and denominators
6 Confidence semantics and coverage
7 Cross-layer consistency
8 Reproducibility and hand-off
Evidence record for each applicable stage
pass (requirement met) fail (requirement violated)
indeterminate (evidence needed to decide is unavailable)
recorded with the permitted action, evidence artefacts and restrictions (machine-readable record, JSON Schema)
use-conditioned decision rule
Adopt
all use-critical tests pass, including any required validation
Adopt with restrictions
documented restrictions remove the risk of every non-pass
External validation required
an indeterminate property could change the decision
Reject for the declared use
a use-critical fail with no defensible restriction
